

Voluntary Speed Compliance Display

The Voluntary Speed Compliance display is typically used in Neighborhoods and School Zones. Watching one in action, you'll see brake lights come on as motorists immediately slow to the speed limit.

By displaying their speed on large 18" numerals, the VSC-1820 F makes the inattentive driver aware of their speed, inducing them to slow down and focus on driving. With more overt speeders, the implicit threat of being 'caught' hits home. The bottom line is that Voluntary Compliance displays have proven **extremely** effective at slowing traffic.

- With the Violation Alert option, even the most inattentive motorists can't help but notice the display as it flashes their speed to further attract attention.
- Available with either Solar Power or AC power.
- 100% electronic LED display has no moving parts to wear out, stick, or break, and carries an 8 year warranty.
- To gain the attention of motorists, or as a warning to pedestrians, the Voluntary Speed Compliance display can activate additional warning lights, sirens, etc., when a rapidly approaching vehicle is detected.
- Violation Alert feature flashes the display when a pre-set speed is exceeded. Conveys increased urgency by flashing more and more rapidly as speed increases beyond the set threshold.
